Problem statement:

Artificial Intelligent-Face Identification API which can detect the face of missing person by scanning through databases, Social media platforms and matches the missing person image provided by department.

Brief about the Idea:

It involves capturing an image of a person's face, extracting facial features, and comparing them to a database of known faces to identify a match.

STEPS:

Step 1:

- **Detection**-- the process of finding a face in an image. This can be done by training an algorithm, usually a **deep neural network (CNN)**, on a vast number of photos that have faces in known positions.

STEPS:

Step 2:

- **Analysis**--is the step that maps faces often by measuring the distance between **nodal points** which includes the **relationship between the eyes, nose, eyebrows, and the rest of the facial features.**

Step 3:

- **Recognition** is the attempt to **confirm the identity** of a person in a photo. It is the last step that has the goal to **give the final answer to the question — Who is in this picture?**

Visual Representation of Architecture:

Image feed

Extracting Nodal point of Face

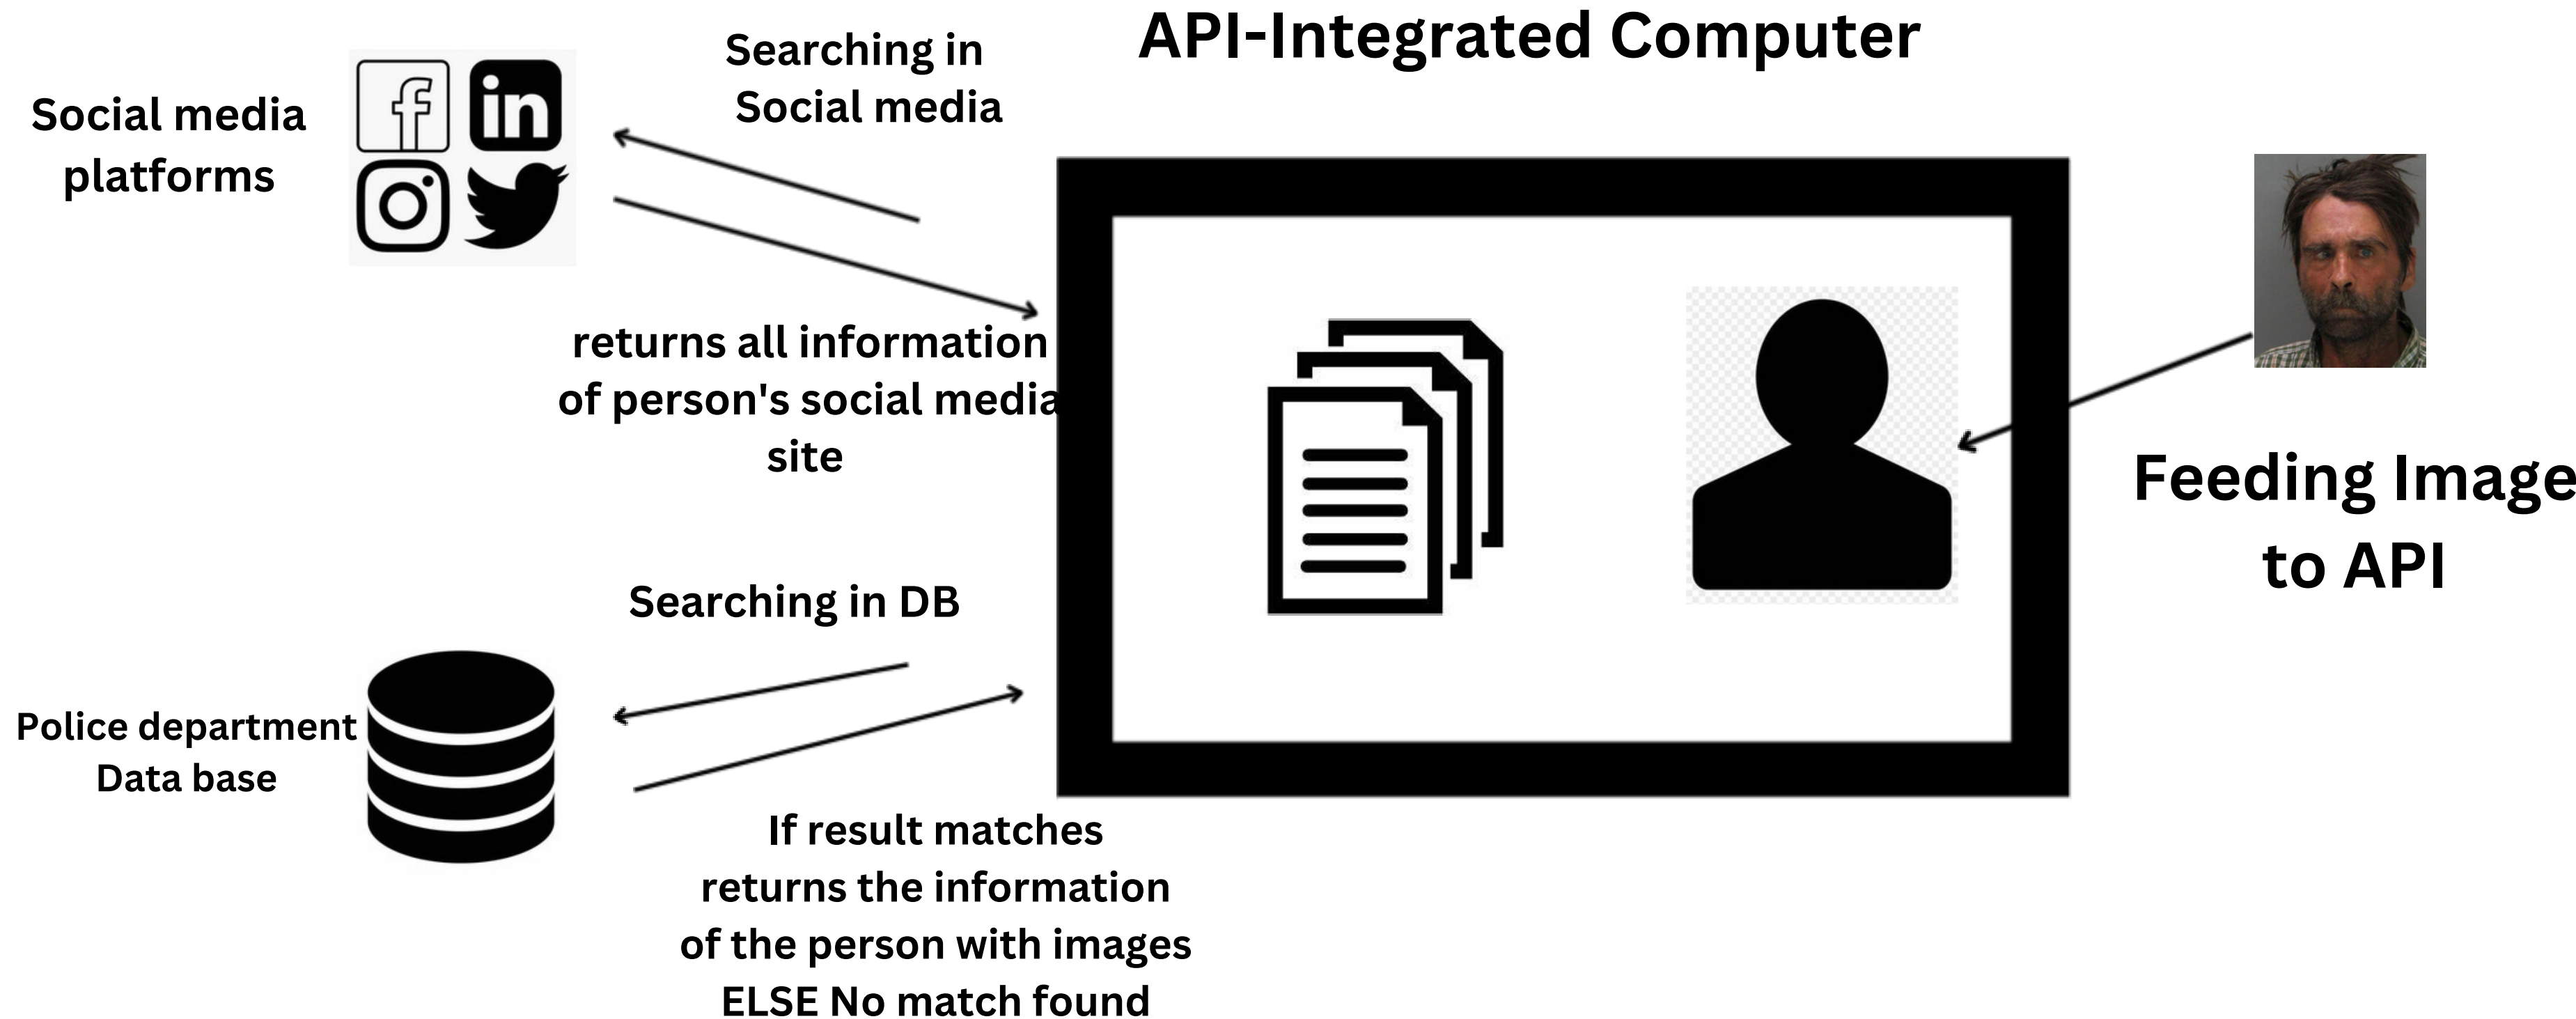

Neural network

Recognizes the face
and
gives desired result

Network calculates the nodal points
and matches the Face

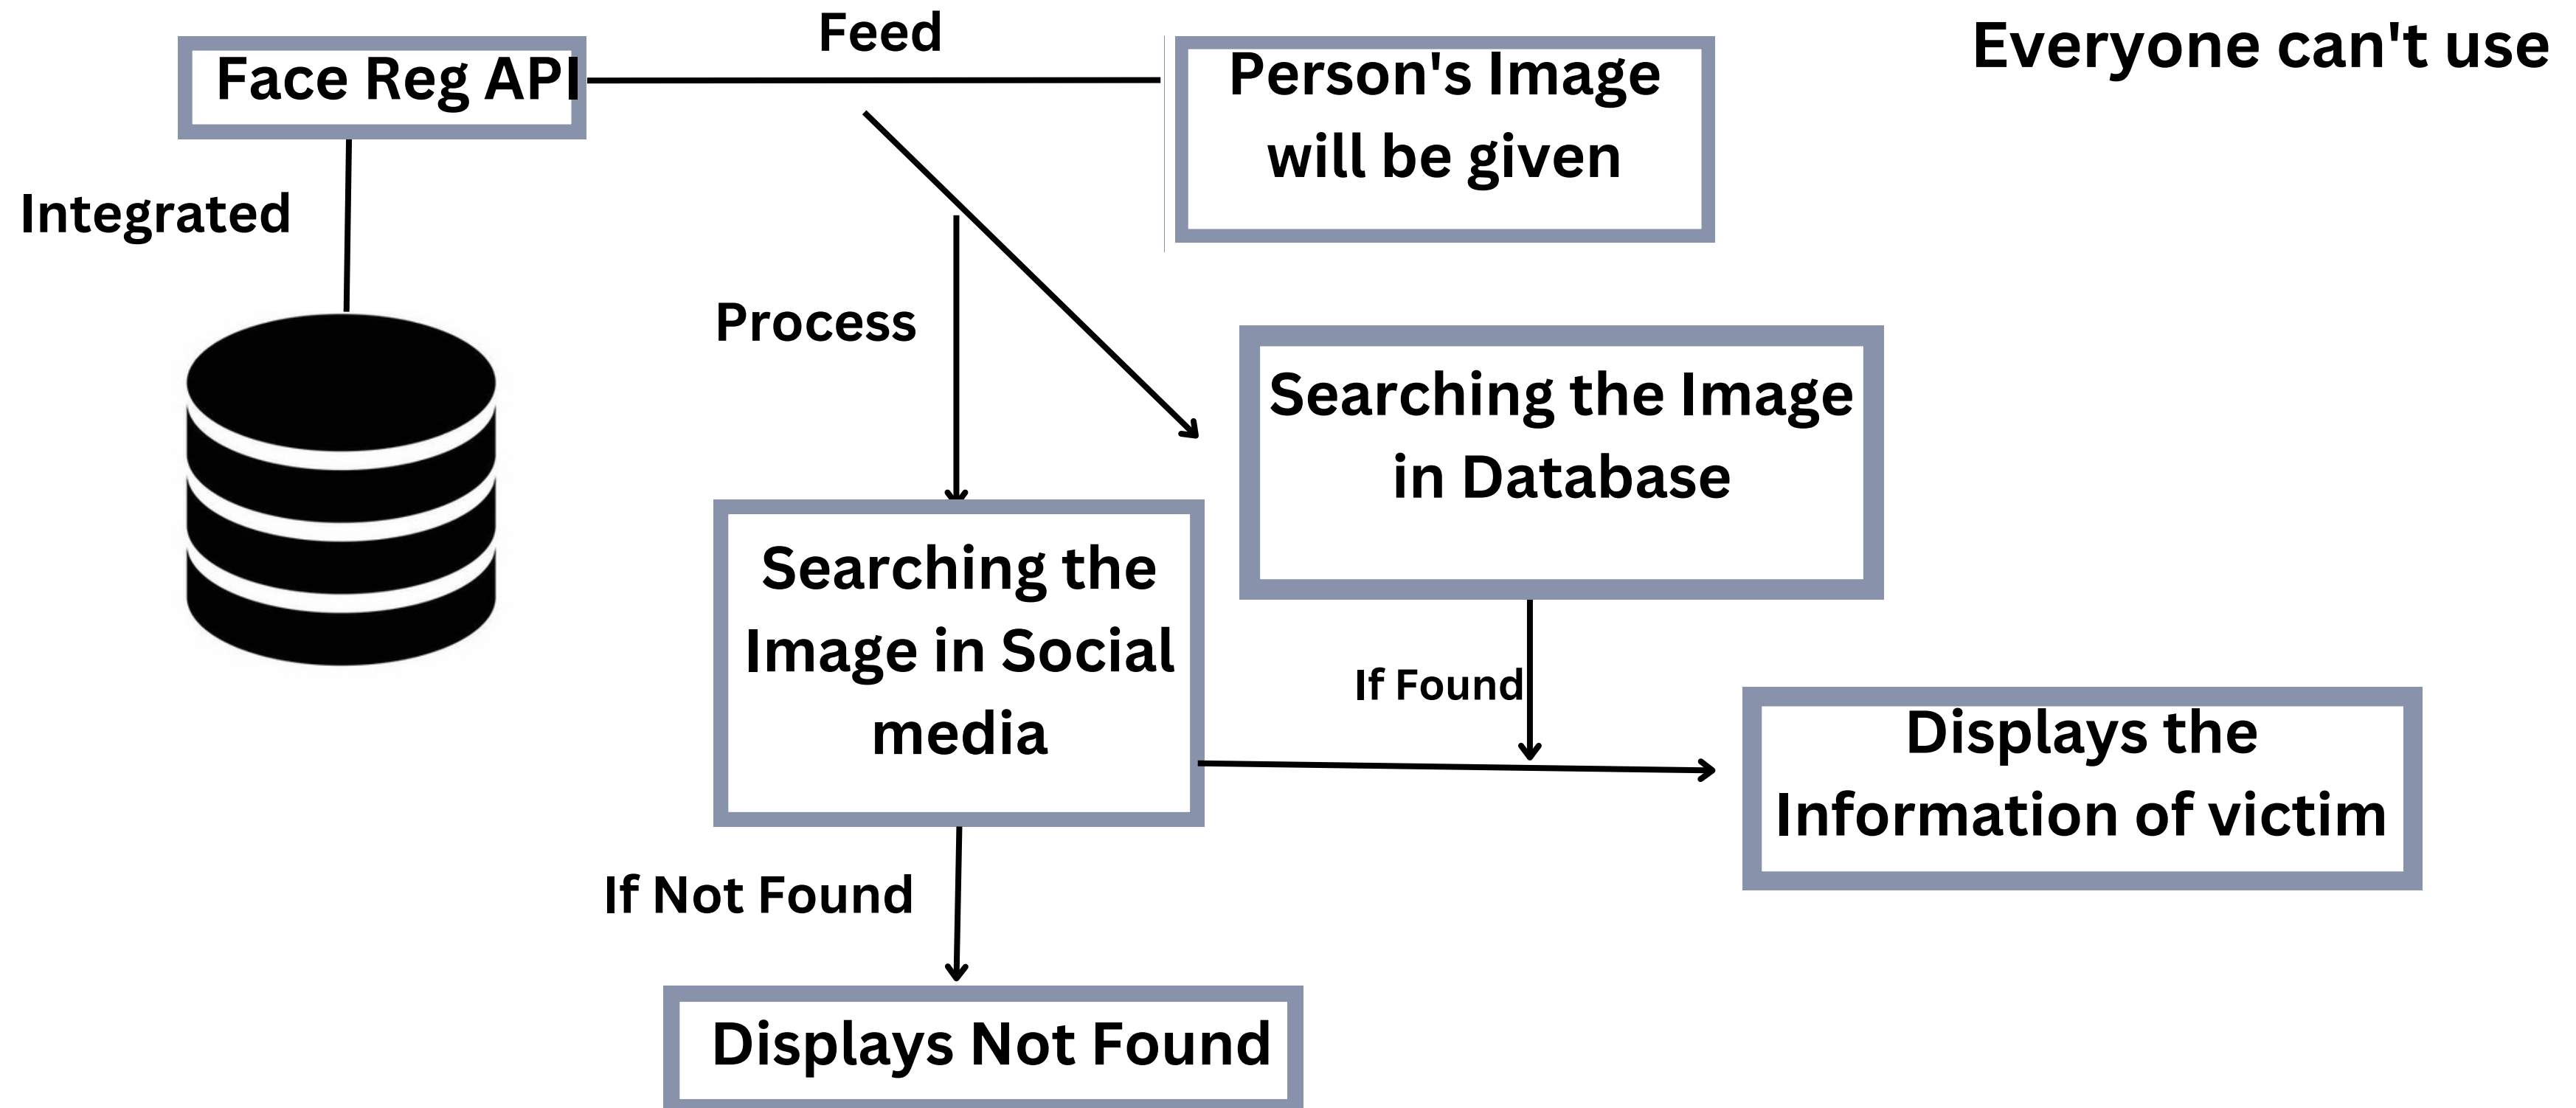

Flow Diagram

Opportunity :

- The opportunity for an Artificial Intelligence-based Face Identification API that can detect missing persons by scanning through databases and social media platforms is significant.
- This technology can be utilized by **law enforcement agencies**, other industries such as **security, surveillance, and marketing to identify individuals and track their behavior.**

Business Logic of the solution :

Technology used :

- **Programming Language-Python**
- **Machine Learning Library - Tensorflow,Pytorch**
- **Image Reconition - OpenCV,DeepFace,Facenet**
- **Socialmedia Integration - Social Mapper**
- **Database Management- MySQL**
- **API Framework - FastAPI**
- **Cloud Framework - Google cloud Platform**
- **Deployement-Heroku**

Estimated cost of/after implementing the solution :

Expenditure	Cost
Database development	10000 INR - 17200INR per Data base
Database Maintanace	20000 INR-25000 INR per month
API Maintanace	1000 INR - 1500 INR per month

POLICE HACKATHON

THANK YOU
